

Battery stickers

I use markers on my batteries like those in the picture. I slide to uncover the green end for a fully charged and to red at the end of a flight. If I set the battery to storage voltage I slide to the mid-point.

The ones that Hobby King sells are alright but it is difficult to get the backing off and they are flimsy so come apart quite easily. I have recently bought some EV-PEAK ones from Tomtop at \$US3.67 for ten. They are much sturdier and the backing comes off easily. You also get some sheets to stick on your battery so you can keep a record of how many times it has been charged. I don't bother. It doesn't make them last any longer and degradation is pretty obvious.
